FAQ for Santa Clara County Schools and Districts

As of June 23, 2022, these are the frequently asked questions regarding the latest public health orders, CDPH K-12 school guidance, and Cal/OSHA COVID-19 standards, and additional details can be found in each document. Please note that this document is updated on a regular basis as additional information becomes available.

VACCINATIONS

Q: Who is currently eligible to be vaccinated?

A: All individuals age 6 months and older are eligible to be vaccinated.

Q: Is my child eligible for a vaccine?

A: Yes! All children ages 6 months and older are eligible for the COVID-19 vaccine. Children with allergies to food or animals should get the COVID-19 vaccine. You can speak with a nurse at the clinic if you have concerns. If your child is sick with COVID-19 right now, they must wait until they get better to get the vaccine.

Q: My child got sick with COVID-19 in the past. Do they still need to get the vaccine?

A: Yes. Having COVID-19 does not prevent your child from getting the virus again. The vaccine is the best protection to prevent your child from getting COVID-19 again.

Q: Is the vaccine for children the same as the one used for adults?

A: The Pfizer vaccine for children is a smaller dose than the Pfizer vaccine for adults. For children ages 5 to 11, it is one-third of an adult dose. For children ages 6 months to 4 years, it is one-tenth of an adult dose. Just like adults, children need two doses of the vaccine, three weeks apart.

Q: Why should I get my child vaccinated?

A: Children can get sick from COVID-19. Some children get rare but severe complications from the COVID-19 virus. The vaccine is the best protection.
• A child can also spread COVID-19 to other people even if that child does not have symptoms. The vaccine is the best prevention.
• Vaccinated children will be able to participate in more activities and attend more events.

Q: What are the benefits to being fully vaccinated for students in school?

A: COVID-19 vaccines are effective. They decrease the chances of getting and spreading the virus that causes COVID-19. COVID-19 vaccines help keep you from getting seriously ill even if you do get COVID-19. Getting vaccinated yourself may also protect people around you, particularly people at increased risk for severe illness from COVID-19.

• Fully vaccinated students may remain in school and avoid interruptions to in-person education, even if they are exposed to someone with COVID-19, so long as they remain without symptoms.

Q: How should school staff determine whether a student's symptoms are due to being infected or recently vaccinated against COVID-19?

A: More than one million teenagers have been immunized against COVID-19 in California as of 2022, including hundreds of thousands since schools reopened this fall. Based on data from clinical trials, post-vaccination side effects in younger children are anticipated to be similar or milder than in adolescents or young adults who received the Pfizer COVID-19 vaccine. Current school-based practices for assessing post-vaccination symptoms in adolescents can be applied to this younger population.

• Most post-vaccination symptoms occur within the first 3 days of vaccination (the day of vaccination and the following 2 days, with most occurring the day after vaccination). Testing may help determine whether symptoms should be attributed to COVID-19 infection that could occur prior to the body's ability to develop immunity from the vaccine, which typically takes about two weeks after the vaccination. Vaccination does not cause positive antigen and PCR test results for COVID-19.
• Additionally, many of CDC's post-vaccine considerations for workplaces apply to K-12 schools, including information about signs and symptoms not caused by COVID-19 vaccination (e.g., cough, shortness of breath, runny nose, sore throat, loss of taste or smell). Suggested approaches for assessing and responding to post-vaccination symptoms are also provided.
Q: Can my child go to school if they don’t feel well soon after being vaccinated?

A: If your child has fever, headache, chills, or body aches soon after vaccination, they should stay home.

- If they are better within 48 hours, your child can go back to school.
- If they still feel sick longer than 48 hours, keep your child at home and talk to your child’s doctor to make sure they don’t have COVID-19 or another infection.
- Please remember, the vaccine can’t give your child COVID, but they could have been infected just before getting vaccinated.

**ISOLATION/QUARANTINE**

**Employee**

Q: What do I do if I test positive for COVID?

A: Employees who test positive for COVID-19 must be excluded from the workplace for at least 5 days after the start of symptoms or after the date of the first positive test if no symptoms.

- Please refer to the [CAL OSHA fact sheet on quarantine and isolation](http://www.calosha.org) for additional information.

Q: How many days should you quarantine if you test positive for COVID?

A: Isolate and stay home for at least 5 days.*Regardless of vaccination status, previous infection, or lack of symptoms.

- Isolation can end after day 5 if symptoms are not present or are resolving and a test collected on day 5 or later tests negative.
- If unable to test or choosing not to test, and symptoms are not present or are resolving, isolation can end after day 10.
- If fever is present, isolation should be continued until fever resolves.
- If symptoms, other than fever, are not resolving, continue to isolate until symptoms are resolving or until after day 10.
- Wear a well-fitting mask around others for a total of 10 days, especially in indoor settings.
Q: What to do if a child is exposed to COVID?

A: Exposed students, regardless of COVID-19 vaccination status, should get tested for COVID-19 with at least one diagnostic test obtained within 3-5 days after last exposure, unless they had COVID-19 within the last 90 days.

A: *Updated 04/07/2022 Schools may consider permitting asymptomatic exposed students, regardless of their COVID-19 vaccination status or location of exposure, to continue to take part in all aspects of K-12 schooling, including sports and extracurricular activities, unless they develop symptoms or test positive for COVID-19. It is strongly recommended that exposed students wear a well-fitting mask indoors around others for at least 10 days following the date of last exposure, if not already doing so.

- Exposed students who had COVID-19 within the last 90 days do not need to be tested after exposure but should monitor for symptoms. If symptoms develop, they should isolate and get tested with an antigen test.
- Exposed students who develop symptoms should see Section 4 of the K-12 Guidance.
- Exposed students who receive a positive test result should isolate in accordance with Section 10 of the K-12 Guidance.

Q: Why does the guidance permit students with known exposures to COVID-19 to remain in-school?

A: Scientific research and experience from around the country demonstrate that when both parties are wearing facemasks appropriately at the time of a school-based exposure to COVID-19, in-school transmission is unlikely and students can safely continue in-person learning. When students remain in school after exposure because the student and the individual with COVID-19 were wearing masks appropriately, this is called modified quarantine. Modified quarantine involves a period of time during which students may continue in-person instruction but should refrain from all extracurricular activities at school, including sports, and activities within the community setting. Testing during modified quarantine provides an additional layer of safety and monitoring. Modified quarantine allows for less missed days of school and supports in-person education.
Q: Do people who have been vaccinated still need to quarantine if they were exposed to someone with COVID-19? (TK-12; Programs for Children/Youth)

A: *Updated 1/12/2022 - Those aged 18+ who are vaccinated and booster-eligible but have not yet received their booster dose are considered not fully vaccinated for the purposes of determining quarantine. Children ages 5-17 who completed their initial series are considered fully vaccinated.

A: Updated 1/12/2022 - In general, fully vaccinated students/youth who have been exposed to a COVID-19 case and are asymptomatic do not need to quarantine, but they should get tested 5 days after exposure and wear a mask for 10 days whenever near others. Exceptions and other considerations may apply. Please see the County Public Health Department’s Home Isolation and Quarantine Guidance - Contact Tracing webpage for more information.

Q: If a student or staff member has COVID-like symptoms, when is a doctor’s note needed before returning to school? (TK-12)

A: If a student or staff person, who is not a close contact to a confirmed COVID-19 case, has COVID-like symptoms that may be common to a variety of illnesses, the person should get tested. If the test result is negative, the student or staff member can return to school when at least 24 hours have passed since resolution of any fever (without the use of fever-reducing medications) and other symptoms have improved. The negative test result should be provided to the school, and a doctor’s note is not needed.

A doctor’s note is only needed before returning to school if:

- the symptoms experienced are identical to those of a documented underlying chronic condition (e.g., asthma or diabetes); or
- the healthcare provider determined, through a medical evaluation of the person, that there is an alternative, named diagnosis (e.g., streptococcal pharyngitis or coxsackievirus) that explains the symptoms experienced.

*For a doctor’s note to be valid documentation of the above situations, the doctor must provide a written explanation that includes all of the following: certification that a medical evaluation was completed; an alternative explanation for symptoms; and a statement that COVID-19 testing is not indicated.
Q: What if my child has runny nose or congestion but no other symptoms of COVID-19, should he/she stay home from school? (TK-12)

A: Many school age children will have symptoms of runny nose throughout the school year due to a range of conditions. It would be unlikely for a child to experience a runny nose as the only symptom of COVID-19, and preventing children with only a runny nose from going to school would likely lead to unnecessary school absences. If a child has a runny nose but no other symptoms of COVID-19, it would be reasonable to allow that child to remain at school, provided the child does not develop any other symptoms of COVID-19.

MASKING

Q: Are wearing masks required in classrooms and indoor school settings?

A: After March 11, 2022, masks are strongly recommended by both the CDPH and the Santa Clara County Public Health Department. School districts and childcare facilities may still choose to require masks. Masking continues to be an important layer of protection along with the continued recommendations around vaccinations, testing and ventilation.

For more information please see the latest CDPH K-12 school guidance.

Q: Will masking be required on school buses?

A: The rules for buses are the same for schools and classrooms. Masks will be strongly recommended on school buses.

Q: Why does the K-12 guidance strongly recommend masks to be worn indoors?

A: Masks are one of the most effective and simplest safety mitigation layers to prevent in-school transmission of COVID-19. SARS-CoV-2, the virus that causes COVID-19, is primarily transmitted via airborne particles. Masks limit the spread of the virus in the air from infected persons and protect others exposed to these particles.

- Masking indoors in K-12 schools is recommended by the American Academy of Pediatrics and by the CDC in its Guidance for COVID-19 Prevention in K-12 Schools (updated July 27, 2021). As the CDC noted: "CDC recommends universal indoor masking for all teachers, staff, students, and visitors to K-12 schools, regardless of vaccination status."
- Masking prevents outbreaks and permits modified quarantine under certain conditions in K-12 settings, supporting more instructional time and minimizing missed school days for students. Additionally, masking indoors is critical to enabling all schools to offer and provide full in-person instruction to all students without minimum physical distancing requirements at the outset of the school year, and isolation of vaccinated OR unvaccinated students, depending on the culture and attitudes in the school or surrounding community.

- CDPH will continue to assess conditions on an ongoing basis, and will determine no later than November 1, 2021, whether to update mask requirements or recommendations.** Indicators, conditions, and science review will include vaccination coverage status, in consideration of whether vaccines are available for children under 12, community case and hospitalization rates, outbreaks, and ongoing vaccine effectiveness against circulating variants of SARS-CoV-2, the virus that causes COVID-19, in alignment with the CDC-recommended indicators to guide K-12 school operations.

**Q: What is a face covering?**

**A:** “face covering” means a covering that:

- completely covers the nose and mouth
- is made with two or more layers of a breathable fabric that is tightly woven (i.e., fabrics that do not let light pass through when held up to a light source)
- is secured to the head with ties, ear loops, or elastic bands that go behind the head. If gaiters are worn, they should have two layers of fabric or be folded to make two layers
- fits snugly over the nose, mouth, and chin with no large gaps on the outside of the face
- is a solid piece of material without slits, exhalation valves, visible holes, punctures, or other openings. This definition of face covering allows various different types of masks including clear face coverings or cloth face coverings with a clear plastic panel that, despite the non-cloth material allowing light to pass through, otherwise meet this definition and which may be used to facilitate communication with people who are hearing impaired or others who need to see a speaker’s mouth or facial expressions to understand speech or sign language, respectively.

Face coverings can be manufactured or homemade, and they can incorporate a variety of designs, structures, and materials. Face coverings provide variable levels of protection based on their design and construction.
Q: When should I double mask?

A: Double masking is an effective way to improve fit and filtration. A close-fitting cloth mask can be worn on top of a surgical/disposable mask to improve the seal of the mask to the face. Layering more than two masks is not recommended as this could be difficult to breathe through. Also, it is not recommended to wear two medical masks, or to wear a medical mask on top of a KN95, KF94, or N95. Double masking may be appropriate where improved fit and filtration are especially important.

Q: When is wearing an effective mask especially important?

A: Some situations require a higher level of protection (improved fit and/or improved filtration):

- In indoor settings with unvaccinated persons or with persons whose vaccination status is unknown.
- In indoor settings with poor ventilation.
- In close quarters with other people where social distancing is not possible (examples: riding a crowded bus, waiting in line at a crowded airport terminal).
- In any public place for people who are older or with medical conditions that put them at higher risk of severe COVID illness.

Even when you're at home, there are times when a higher level of protection is important, such as when:

- Providing care for family members who are sick with or may have been exposed to someone with COVID-19.
- Living in a household with someone who is suspected of having or has COVID-19.
- Someone from outside your household comes into your home who may be unvaccinated (example: friend, relative, repair person).
• You work outside the home and live with someone who is older or with a medical condition that puts them at higher risk of severe COVID illness.

Q: Is it required to wear face covering indoors in Santa Clara County?

A: On March 2, 2022 the County of Santa Clara Public Health Department announced that all masking metrics have been met and therefore indoor masking will no longer be required beginning March 2. However, the Public Health Department and the California Department of Public Health strongly recommend that the public continue to wear masks in all indoor public spaces.

Q: How does CDPH’s February 28, 2022 Guidance for the Use of Face Masks impact the COVID-19 emergency temporary standards (ETS) requirements?

A: Executive Order N-5-22 suspends section 3205(c)(6)(A) of the ETS, which required that unvaccinated workers wear face coverings in all indoor workplaces and all vehicles. This requirement will no longer be enforced. However, other face covering requirements within the ETS remain in place, including provisions requiring face coverings in outbreaks and in employer-provided transportation. Also still in place is section 3205(c)(6)(B), which requires that employers provide face coverings and ensure they are worn when required by orders from the CDPH. In addition, employees can request face coverings from the employer at no cost to the employee and can wear them at work, regardless of vaccination status, without fear of retaliation, as specified in section 3205(c)(5)(J).

In addition, the February 28, 2022 masking order from the CDPH requires that all workers in the following sectors wear face coverings indoors:
• Indoors in K-12 schools, childcare (through March 11, 2022)
• On public transit (examples: airplanes, ships, ferries, trains, subways, buses, taxis, and ride-shares) and in transportation hubs (examples: airport, bus terminal, marina, train station, seaport or other port, subway station, or any other area that provides transportation)

Q Will the mask requirement come back into effect?

A: CDPH will continue to assess conditions on an ongoing basis to determine when and how to update masking guidance, with consideration of the indicators and factors noted below, as well as transmission patterns, global surveillance, variant characteristics, disease severity, available effective therapeutics, modeling projections, impacts to the
health system, vaccination efficacy and coverage, and other indicators to guide K-12 school operations.

Q: What if someone is exempt from wearing a mask?

A: Persons exempted from wearing a face covering due to a medical condition are strongly recommended to wear a non-restrictive alternative, such as a face shield with a drape on the bottom edge, as long as their condition permits it.

COHORING/DISTANCING

Q: Is physical distancing required?

A: CDPH recommends focusing on the other mitigation strategies provided in this guidance instead of implementing minimum physical distancing requirements for routine classroom instruction.

Q: Is there a maximum cohort size or minimum amount of physical distancing required for in-person instruction? (TK-12)

A: CDPH’s COVID-19 Public Health Guidance for K-12 Schools in California, 2021-2022 School Year does not set a maximum cohort size or minimum amount of distancing between students and/or staff. On physical distancing, the State’s guidance specifically states that “[r]ecent evidence indicates that in-person instruction can occur safely without minimum physical distancing requirements when other mitigation strategies (e.g., masking) are fully implemented. This is consistent with CDC K-12 School Guidance.”

Q: What is the recommendation for how to serve students with disabilities who are receiving in-person instruction? (TK-12)

A: CDPH’s COVID-19 Public Health Guidance for K-12 Schools in California, 2021-2022 School Year states that “schools should carefully consider how to address the legal requirements related to the provision of a free, appropriate public education and requirements to reasonably accommodate disabilities, which continue to apply.” It also directs schools “to the CDC K-12 guidance section on Disabilities or other health care needs’ for additional recommendations.”

Q: Can parents, especially those of younger children, be in the classroom?
A: CDPH’s COVID-19 Public Health Guidance for K-12 Schools in California, 2021-2022 School Year recommends the following:

- Schools should review their rules for visitors and family engagement activities.
- Schools should limit nonessential visitors, volunteers, and activities involving external groups or organizations with people who are not fully vaccinated.
- Schools should not limit access for direct service providers, but can ensure compliance with school visitor policies.
- Schools should continue to emphasize the importance of staying home when sick. Anyone, including visitors, who have symptoms of infectious illness, such as flu or COVID-19, should stay home and seek testing and care.

TESTING

Q: Who should get tested for COVID-19?

A: Regardless of vaccination status, the County of Santa Clara Public Health Department urges the public to get tested for COVID-19 when experiencing symptoms of COVID-19 or when exposed to a confirmed COVID-19 case. In general, the Public Health Department recommends testing 2-5 days after the last exposure to a confirmed case of COVID-19. If you develop symptoms of COVID-19, the County recommends that you get tested immediately. Please consult the County guidance on testing and quarantine for COVID-19 for further details.

In addition, the California Department of Public Health and/or the County of Santa Clara Public Health Department recommend or require that certain additional groups of people get tested for COVID-19, including, but not limited to:

- Healthcare personnel who are unvaccinated or have not received their booster, or who work in certain settings like skilled nursing facilities.

- Employees of K-12 schools who are unvaccinated or have not received their booster.

- Employees working in congregate care settings, such as jails and homeless shelters, who are unvaccinated or have not received their booster.

- Fully vaccinated workers who have underlying immunocompromising conditions and work in certain high-risk settings.
The above list only provides examples of individuals for whom the State or County requires or recommends testing and is not intended to be exhaustive. Please consult the California Department of Public Health and County of Santa Clara Public Health Department websites for the latest testing guidance.

Q: I am the parent of a K-12 student for whom the State recommends routine surveillance COVID-19 testing. Can my child get a COVID-19 test from a Healthcare Facility?

A: A Healthcare Facility is not required to provide your child with a COVID-19 test as part of the routine surveillance testing recommended by the State for all K-12 students. However, if your child exhibits COVID-19 symptoms or has been exposed to someone with a positive COVID-19 test, the Healthcare Facility must provide your child with a COVID-19 test within 24 hours if you are a patient of the Healthcare Facility and request a test.

- Please note that even if you do not qualify for a COVID-19 test under the Order, your healthcare provider may still choose to provide you with a test or you may be able to obtain one from another organization.

Q: How frequently should testing occur for students in modified or standard quarantine? When can quarantined students resume all activities?

A: Based on experiences in California schools so far, CDPH recommends the same testing cadence for those in modified quarantine and those in standard quarantine, as follows: It is recommended to test as soon as a person is informed that they were a close contact of someone with COVID-19. Subsequent testing may occur on or after Day 5 from the date of last exposure. Quarantine can end after Day 5 if a test specimen is collected on or after Day 5 from the date of last exposure and tests negative.

Q: What type of test may be used to assess a person's status during quarantine or to exit quarantine?

A: Any FDA-approved antigen diagnostic test, PCR diagnostic test, or pooled PCR test is acceptable for evaluation of an individual's COVID-19 status during quarantine. For individuals who have been recently infected (within the past 90 days), antigen testing is strongly recommended as PCR results may remain persistently positive and not be indicative of a new active infection.
• Repeat antigen testing and/or confirmatory molecular testing should be considered in individuals who receive a negative result with an antigen test but have symptoms specific for COVID-19 (such as loss of taste and smell). For more information, see the CDPH updated testing guidance.

Q: Is at-home testing permitted?

A: At-home testing, also known as over-the-counter (OTC) testing, is permitted to evaluate the status of a student who is in isolation or quarantine (or received a notification of exposure). Schools are encouraged to provide resources to parents and families regarding the best practices for using and reporting at-home tests. Contact CDPH for support as needed. Schools are not required to verify the results of at-home testing but may consider verification methods listed in the OTC guidance.

Q: Should students, teachers, and other school staff be routinely tested? (TK-12)

A: CDPH’s K-12 school-based COVID-19 testing strategies for school year 2021-22 outlines the State’s recommendations and support for testing of students, teachers, and other school staff. In addition to testing of symptomatic individuals and close contacts, screening testing can be helpful in preventing COVID-19 transmission on campus. More frequent screening testing is more likely to result in identifying COVID-19 cases early and preventing on-campus transmission.

Q: How should schools manage testing resources

A: CDPH recommends that schools facilitate access to testing resources, particularly for vulnerable populations within their communities. Tracking results from all exposed students is not required. Parents should notify schools of positive results. Schools that do not have access to sufficient testing support are strongly encouraged to promptly contact local health departments and/or CDPH for additional guidance.

GROUP-BASED CONTACT TRACING APPROACH TO STUDENTS EXPOSED TO COVID-19 IN A K-12 SETTING

Q: If using the Group-Tracing Approach, what should students notified of an exposure be told?

A: Schools should notify students who spent more than a cumulative total of 15 minutes (within a 24-hour time period) in a shared indoor airspace (e.g., classroom) with someone with COVID-19 during their period of infectiousness.
• Notification should occur to "groups" of exposed students (e.g., classmates, teammates, cohorts, etc.) rather than contact tracing to identify individual "close contacts" (e.g., those within 6 feet).
• Notifications should be provided to all individuals considered exposed, including those who are vaccinated and/or recently infected.
• For example, if a student in tenth grade is diagnosed with COVID-19, the school should notify groups with whom that student interacted as per the criteria above, such as those in the same classes, sports team, and/or other extracurricular cohorts.
• Notifications should highlight that the student may remain in school but should get tested. Scientific research and experience from around the country – including from California during this school year – demonstrate that schools remain among the safest places for children to be. Information regarding where and how to access testing resources should be included, along with isolation instructions in case the exposed individual tests positive or develops symptoms.
• A sample notification letter, [available here] may be downloaded and customized by schools to facilitate communication to exposed students.

SCHOOL-BASED EXTRACURRICULAR ACTIVITIES

Q: Are there additional recommendations to protect against transmission of COVID-19 during sports in K-12 settings

A: Sports-related transmission of COVID-19 often occurs off the field of play. This includes during weight-training, team meetings, and while commuting with teammates to and from activities. Students are required to wear masks indoors in school settings and on school-based transportation. This includes weight rooms, locker rooms, and school buses, even if the sport itself is played outdoors.

• Additional recommendations to mitigate sports-related transmission of COVID-19 include the following: vaccinate all eligible student athletes, coaches, and parent/adult volunteers; consider screening testing programs; hold team meetings outdoors; minimize team meals and other activities not related to practice or play; wear masks during shared transportation (i.e., carpooling to and from activities); avoid sharing water bottles; and train in pods (e.g., separate teams into varsity/junior varsity, offense/defense, different track & field events, etc.). Note that local health jurisdictions may have additional rules and regulations. Additional recommendations are provided by the American Academy of Pediatrics.
Q: Can K-12 schools host dances and large assemblies?

A: School dances, large assemblies, and other school-based crowded events have the potential to cause substantial spread of COVID-19 within and beyond the school community. Schools are encouraged to consult with local health officials before deciding to host such events, particularly in communities where COVID-19 remains highly prevalent and/or vaccination rates remain low. The following are additional considerations to optimize health and safety for all attendees:

- Host such events outdoors whenever possible.
- Separate the event into smaller cohorts (by grade, for example) whenever possible.
- Ensure all eligible attendees (students and adults) are fully vaccinated. Conduct pre-entry testing for all unvaccinated attendees at or just prior to the event.
- Plan in advance how to identify close contacts or exposed groups if it is later discovered that someone with COVID-19 attended the event. Consider requiring pre-registration with CA Notify and maintaining a log of all attendees (even those arriving pre-event) at the door/entrance to the event.
- Consider requiring the use of masks at outdoor school-based large, crowded events.
- If food or drinks are to be served, serve them outdoors whenever possible and/or place them away from other areas to clearly designate spaces where masks must be worn.

ADDITIONAL FREQUENTLY ASKED QUESTIONS

Q: I have questions about supporting my child’s needs while at home. Where can I find support?

A: The Santa Clara County Office of Education’s Inclusion Collaborative has expanded its Inclusion Support Warmline Service. This service is available 8 hours per day and has the following language capabilities: Spanish, Vietnamese, Mandarin, and Korean. Support will be provided by answering questions, addressing concerns and providing social stories to support children’s understanding of ‘social distancing’, etc. Also available, will be alternative educational resources, support for distance learning (media, etc.) and information on addressing individual needs for children with IEPs.

- The Inclusion Collaborative is also hosting weekly Family Resource Chats where parents and educators can join a virtual chat with an Inclusion Specialist to discuss the weekly topic, have their questions addressed and network with other
parents and educators. Call (408) 453-6651 or email WarmLineRemoteLearning@sccoe.org.

A: The California Parent and Youth Helpline provides support and resource referrals to parent and youth during the current COVID-19 pandemic, 7-days a week from 8:00 a.m. to 8:00 p.m. Call or text 1-855-4APARENT (855-427-2736) for services in English, Spanish and other languages. For more information, please visit: https://caparentyouthhelpline.org/

A: Additional distance learning resources can also be found on the Santa Clara County Office of Education’s COVID-19 Learning Resource Portal.

Q: Are school boards still meeting during the shelter in-place?

A: On September 16, 2021, the Governor signed AB 361 authorizing a legislative body subject to the Brown Act to continue to meet remotely using teleconference without compliance with the Brown Act teleconference rules if certain conditions are followed including (1) initially the existence of a proclaimed state of emergency and (2) requirements or recommended measures from state or local officials to promote social distancing.

Q: Where can I find COVID-19 updates?

A: Updates can be found at the following websites: Santa Clara Public Health Department; Governor Newsom’s Newsroom; Santa Clara County Office of Education. The Santa Clara County Office of Education also has a hotline available at (408) 453-6819.
