The American Dietetic Association has declared March “National Nutrition Month®” as a means of promoting nutrition education and encouraging healthy eating habits. In honor of that, this month will focus on fueling the body. One of the best things you can do to make sure your body is properly fueled every day is to eat a healthy breakfast every morning! Beyond that, it is important to eat foods high in calcium to keep bones strong, and drink plenty of water to keep cells functioning properly. Coincidentally, the first full week of March is National School Breakfast Week.

Eat a healthy breakfast every morning by including foods from at least three of the food groups, making sure that at least one is high in calcium.

Mom was right; breakfast is the most important meal of the day. Breakfast literally means to “break” a “fast.” By the time we wake up in the morning, we most likely have not had anything to eat for at least eight hours. The brain needs food, specifically carbohydrates, to function properly. After an eight hour fast, the brain is starving for some food, some fuel! Feeding the brain will help your students do well in school and stay alert during class. Of course, food also fuels the muscles and helps them to start moving in the morning and perform well during activities.

A healthy breakfast contains foods from at least three of the food groups. Aim to have a combination of whole grains (such as cereal or whole wheat toast), fruit (such as fresh, frozen or dried fruit or 100% fruit juice), vegetables (such as vegetables in an omelet or 100% vegetable juice), calcium-rich foods (such as low-fat yogurt or milk), and/or protein (such as eggs or cheese). Sugary cereal or breakfast treats are not the best option because they generally aren’t whole grain and just provide a quick surge of energy (in the form of sugar) that disappears quickly.

Bones need a different type of fuel, calcium (a mineral), to keep them strong. It is hard for most students to start thinking about the hazards of weak bones. However, childhood happens to be the most important time to start building strong bones. If a person does not have enough calcium in his or her diet, bones become weak and brittle and are more likely to break. Dairy products are the best source of calcium; however, it is not the only source. When choosing dairy products, it is important to make low-fat selections. Non-dairy sources of calcium include some juices, cereals, legumes, and vegetables. (See handout for more non-dairy calcium sources.)

Water is also very important for the body and helps to keep it performing well throughout the day. The human body is made up of about 60% water. Water is lost every day by sweating, going to the bathroom, and even breathing! If the lost water is not replaced, cells in the body start to dehydrate. Even mild dehydration can lead to lack of concentration, fatigue, and poor performance in sports, activities, and learning. So drink up and fuel those cells!
Take Home Activities

1) Make sure healthy breakfast foods are available for everyone in the house.
2) Sit down and have breakfast together in the morning.
3) See what can be made the night before so breakfast will be easy in the morning (e.g. make a fruit smoothie the night before and freeze it).
4) Identify challenges that make it difficult for the family to eat breakfast. As a family, how can you overcome some of these challenges?
5) Identify all of the foods in the home that are good sources of calcium. If the family drinks milk, try milk with slightly less fat (e.g. go from whole to 2%, 2% to 1%, or 1% to non-fat).
6) If possible, encourage your schoolchildren to participate in National School Breakfast Week (the first full week in March).

School Activities

1) Promote school breakfast during National School Breakfast Week (the first full week in March). See http://www.asfsa.org or http://www.schoolnutrition.org/nsbw
2) If vending machines or snack bars are available to students, look into offering healthy breakfast foods.
3) Ensure that low- and non-fat milk options are available for snacks and meals.
4) Announce in the daily bulletin what the principal had for breakfast that morning.

Ask a local juice shop to donate fruit smoothies for breakfast, or ask the PTA to purchase the supplies and make smoothies in the classroom!

Classroom Reward Ideas

Resources

American School Food Service Association (ASFSA) - National School Breakfast Week
http://www.schoolnutrition.org/nsbw
ASFSA sponsors National School Breakfast Week during the first full week in March each year. See this website for additional information on the importance of breakfast and for activities to promote breakfast consumption both in the school and at home. Information, activities and menus are updated each year.

American Dietetic Association (ADA)
http://www.eatright.org
March is National Nutrition Month® (NNM). NNM is a nutrition education and information campaign sponsored annually by ADA. The campaign is designed to focus attention on the importance of making informed food choices and developing sound eating and physical activity habits. Search for NNM and the current year to find information about events.
Resources

Food and Nutrition Services, USDA
The Eat Smart Play Hard campaign is designed to promote children’s health by motivating children and their caregivers to eat healthy and to exercise. They have handouts for students and parents in both English and Spanish that promote a healthy breakfast every morning.

National Dairy Council
http://www.nutritionexplanations.org
The National Dairy Council has a lot of wonderful materials that promote breakfast and increased calcium consumption to kids, parents, teachers and food service workers. Kids can play interactive games while learning about the importance of a healthy breakfast. Teachers can find information and activities to help teach nutrition to their students. There are also several contests in which classrooms can participate.

California Dairy Council
http://www.dairycouncilofca.org/edu
Order free materials to use in the classroom that promote healthy eating habits, breakfast and increased calcium consumption. Web-based resources and activities are also available for download. Almost all activities are linked to California State Academic Content Standards. A Mobile Dairy Classroom can come to elementary schools for assemblies!

The National Bone Health Campaign
http://www.cdc.gov/powerfulbones/index_content.html
Powerful Girls have Powerful Bones is a site for young girls that has information and activities related to bone health. However, there is a lot of great information here that boys might find useful as well!
• Follow a simple, multi-step, written recipe to make a healthy breakfast item for the class to share. Ask the cafeteria staff for assistance.

• Students can write stories about their favorite breakfast. They can then share these stories out loud.

• Have students put a selection of breakfast cereals in alphabetical order. Try to select cereals that are healthy and that the students enjoy.

• In third grade, students start to learn that food is a form of energy for our bodies. When discussing foods that provide the body with energy, focus on healthy choices.

• Discuss ways in which people use local resources to modify or define water resources. In other words, how do the sites of our drinking water differ from those of our recreational water?

• Discuss some of the barriers to eating a healthy breakfast every morning. As a class, can you come up with some ways to overcome these barriers?

Pass the Energy, Please! by Barbara Shaw McKinney – Science
